

Product Update

Hybrid Toilet Systems

Previously Gough Plastics have used Bokashi and EMC on the Hybrid Toilet system. However, we are now using a new product, called Biomagic, which we have found is very effective in waste reduction and odour control. From the experience that we have had with Biomagic we would recommend that as you run out of your old products that you change over to Biomagic. Overall the costs are lower and it works much more effectively and you can use it for cleaning too. We supply Biomagic in a high concentrate formula in 5L bottles, this when diluted down can give you as much as 100L.
